

Business Question and Visualization Report

Date	16 August 2026
Project Name	AI Career Pulse: Decoding the Job Market

Hiring patterns in AI keep shifting — pay bands, in-demand skills, and which industries are actively hiring all move quickly, and they look different depending on company size, role, and seniority. This project pulls that data into Tableau and turns it into a set of interactive views covering pay trends, the roles seeing the most postings, where opportunity is concentrated by industry and company size, and how hiring volume has moved over time. Together, these views are meant to give job seekers and career changers a clearer, more current read on the AI job market to help inform their next move

Visualisation Used in Tableau

Business Question	Visualisation
Job Category vs Annual Salary	Tree Map
Job Title vs Annual Salary	Bar Chart
Company Size vs Salary	Horizontal Bar Chart
Key Performance Indicators	KPI Cards
Job Title vs Job Count	Horizontal Bar Chart
Industry vs Salary	Segmented Bar Chart
No. of Jobs Posted by Year	Year-based Chart
Job Category vs Experience Level	Heat Map

Business Questions and Visualisation

1. How does average annual salary vary across different AI job categories?

- o *Visualization:* Tree Map — sized by total annual salary. Each block represents an AI job category, and the block size shows its share of overall compensation, making it easy to spot the categories — such as AI Engineering — that dominate salary spend across the market.
- o *Screenshot of visualisation*

2. Which AI job titles command the highest average annual salaries?

- o **Visualization:** Bar Chart — ranks AI job titles by average annual salary. Taller bars mark the highest-paying roles, making it simple to compare specialized positions such as AI Security Engineer or AI Product Manager against one another.
- o *Screenshot of visualisation*

3. How does total annual salary spend differ across company sizes?

- o **Visualization:** Horizontal Bar Chart — totals annual salary by company size, from startups through Big Tech, showing at a glance whether larger

organizations account for a bigger share of overall AI compensation than smaller ones.

- o *Screenshot of visualisation*

4. What do the headline numbers say about pay and experience across the AI job market?

- o *Visualization: KPI Cards* — surface three quick benchmarks at a glance: average annual salary, average minimum salary offered, and the minimum years of experience seen across postings, giving an instant snapshot before drilling into the detailed views.

- o *Screenshot of visualisation*

5. Which AI job titles appear most frequently in job postings?

- o *Visualization:* Horizontal Bar Chart — counts postings by job title, with longer bars marking the roles in greatest demand, highlighting titles such as LLM Engineer and Prompt Engineer where hiring activity is concentrated.
- o *Screenshot of visualisation*

6. How are AI salary tiers distributed across different industries?

- o *Visualization:* Segmented Bar Chart — breaks postings down by industry and colors them by salary tier, making it possible to see whether a given industry leans more toward entry-level or senior-level compensation relative to others.
- o *Screenshot of visualisation*

7. How has the number of AI job postings changed year over year?

- o **Visualization:** Year-based Chart — totals job postings by year, making it easy to track whether hiring activity in the AI space is trending upward or leveling off from one year to the next.
- o **Screenshot of visualisation**

8. How is experience level distributed across the different AI job categories?

- o **Visualization:** Heat Map (Matrix) — cross-tabulates job category against experience level, with shading intensity reflecting how many postings fall into each combination, showing for instance whether a category skews toward senior and lead-level hiring or is spread more evenly.
