

Dashboard Design

Date	20 August 2026
Project Name	AI Career Pulse: Decoding the Job Market

This document captures the dashboard design for the AI Career Pulse: Decoding the Job Market project, which turns AI job-market data into a set of visual, interactive dashboards covering salary, hiring volume, industry, and experience-level trends.

Activity 1: Interactive and visually appealing dashboards

The dashboard is designed to make AI job-market analysis easy to scan and explore. It brings together KPI cards, a treemap, bar charts, a year-wise view, an industry-wise salary tier chart, and a category-experience heat map. Since a single screen cannot hold all of this without feeling cluttered, the layout is split across two connected dashboard views — the first centred on salary benchmarking (by category, title, and company size) and yearly posting trends, and the second centred on job-count comparisons, industry salary tiers, category-experience patterns, and key performance indicators.

Dashboard Components

Dashboard Element	Chart Type	Purpose
Job Category vs Annual Salary	Treemap	Shows how annual salary is distributed across AI job categories, highlighting which specializations command the highest pay.
Job Title vs Avg. Annual Salary	Bar Chart	Compares average annual salary across individual AI job titles.
Company Size vs Annual Salary	Horizontal Bar Chart	Compares salary levels across company sizes, from startups to Big Tech/FAANG+.
No. of Jobs Posted by Year	Year-wise View	Tracks how AI job-posting volume has changed between 2025 and 2026.
Key Performance Indicators (KPIs)	KPI Cards	Summarizes average annual salary, average minimum salary, and minimum years of experience at a glance.
Job Title vs Job Count	Horizontal Bar Chart	Compares posting counts across AI job titles to show which roles are most in demand.
Industry vs Salary Tier	Segmented Column Chart	Shows how salary tiers (Entry, Mid, Upper-Mid) are spread across

Dashboard Element	Chart Type	Purpose
		industries such as Government, Healthcare, and Retail.
Job Category vs Experience Level	Heat Map	Highlights which job categories are concentrated at particular experience levels, showing where entry-level, mid-level, and senior/lead demand is strongest.

Dashboard 2

Major Outcomes / Key Insights

- AI Engineering leads the market:** In the Job Category vs Annual Salary view, AI Engineering records the highest value (4,714,000), well ahead of categories such as ML Operations (606,000) and Security (577,000), showing it is currently the most valued AI specialization.
- Senior AI Engineering talent is in high demand:** The Job Category vs Experience Level heat map shows AI Engineering concentrated heavily at the Lead (10+ yrs) level (5 postings), more than any other category-experience combination, pointing to strong demand for highly experienced engineers.
- Pay varies sharply by job title:** AI Security Engineer (\$141K) and AI Product Manager (\$140K) post the highest average annual salaries among the compared titles, while AI Business Analyst trails at \$98K — a gap of more than \$40K between the highest- and lowest-paid roles shown.
- Enterprise companies offer the strongest pay:** Enterprise (5000+) organizations report the highest combined annual salary figure (3,529,000) among company-size groups, narrowly ahead of Mid-size (2,957,000) and Big Tech/FAANG+ (2,891,000).
- LLM expertise tops hiring demand:** LLM Engineer has the highest job count (7) among all titles tracked in the Job Title vs Job Count view, reflecting the growing emphasis on large-language-model skills over other AI specializations.
- Government roles sit at the top salary tier:** In the Industry vs Salary Tier view, Government is the only industry reaching the Upper-Mid (\$150K-200K) tier, while Healthcare and Retail cluster mostly in the Entry to Mid (\$100K-150K) range.
- Hiring activity is trending upward:** Postings recorded for 2026 (3) already exceed those logged for 2025 (1) in the current view, consistent with the broader trend of accelerating AI hiring.

Activity 2: Publish Dashboard on Tableau Public

The completed dashboard has been published to Tableau Public.
